SUBJECT INDEX

Alfalfa, potassium content of, on 20 N. J. soils, 143
Apparatus—
  calibrating instruments for measuring soil moisture, *see* Methods
  soil permeameter, 340–342
  testing soil permeability, 358–359
Bacteria—
  influence of season and treatment on nutritional groups, *see* Microorganisms
  root-nodule of *Astragalus sinicus* L., 291–293
Books, *see* end of letter B
Boron—
  base exchange—
    changes in cranberry soils, *see* Cranberry soils
    influence of removal of iron oxide from clays, *see* Iron oxide removal from clays
    methods, *see* Methods
  water-soluble—
    determining, *see* Methods
    in citrus orchards in California, 134

Wilson, D. W. Laboratory Manual of Physiological Chemistry, 5th ed., 335

Calcium carbonate, prevention of precipitation in soil solutions, 35–41
Citrus, effects of pH on growth, *see* pH
Colloids, distribution and availability of phosphorus in, 79–84
Cranberry soils, effect of alkaline water on, 405–408
Cross-inoculation of legumes, *see* Legumes
Earthworm casts, chemical composition, 367–375
Ferroaluminosilicates, physicochemical properties, 209–224
Fertilizers, influence on root accumulation of turf, 17–24
Field capacity, dependence on depth of wetting field soils, 43–50
Forest soils, determination of physical properties, 325–333

Fungi—
associative and antagonistic effects, 101–103
biochemical activities, 98–101
nature of, in soil, 96–97
plating media, use of rose bengal, *see* Rose bengal
population in relation to growth of higher plants, 104–105
role in soil processes and plant nutrition, 106
Guayule, salt tolerance of, 399–403
Iron oxide—
fixation of phosphate by, 243
removal from clays, influence on base-exchange properties and x-ray diffraction patterns, 411–424
Kaolinite, phosphorus fixation in, *see* Phosphorus
Legumes, abandoning cross-inoculation groups, 61–69
Lime content in Idaho soils in relation to phosphate fertilization, 253–258
Magnesium deficiency in McIntosh apple, induced by potassium fertilization, 441–454
Methods—
base-exchange capacity, 425–431
boron, water-soluble, by turmeric method, 123–237
calibrating instruments for measuring soil moisture, 433–440
exchangeable bases (total), 205–208
exchangeable potassium, 307–309
floc volume of soils, 163–164
Neubauer modifications, *see* Neubauer test
nitrogen in soil (rapid) 289–290
organic acids in plants, 296–297
permeability of soils, 351
physical properties of forest soils, *see* Forest soils
stability of soil structure, 117
ultraclay fractions, by measuring floc volume, 174
Microorganisms—
effect of temperature on, 377–387
influence of season and treatment on incidence of nutritional groups of bacteria, 473–479
Moisture—
conservation, estimation from meterological data, 177–193
constants, as effected by physical conditions, 1–16
content-surface force curves, interpretation of, 225–242
equivalent—
of fragmented samples, 1–8
of monolith samples, 8
instruments for measuring soil, in situ, 433–440
Montmorillonite, phosphorus fixation in, *see* Phosphorus
Minerals in sugar beets, *see* Sugar beets
Neubauer test—
modifications in, 389–397
use in phosphate studies, *see* Phosphorus availability
Nitrogen—
accumulation by microorganisms at different soil temperatures, *see* Microorganisms
content in sugar beets, *see* Sugar beets
rapid determination in soil, *see* Methods
Organic acids in plants—
in relation to oxygen supply, *see* Oxygen
methods of determining, *see* Methods
Oxygen, importance in nutrient substrate for plants, 295–303
Permeability—
effect of entrapped air on, 355–365
of disturbed soil samples, 337–353
Peach roots, translocation of potassium in, *see* Potassium
Peat, lowmoor, oxidation loss with different water tables, 195–204
Phosphorus
availability of, in organic and inorganic carriers, 151–161
carbonic acid soluble, in Idaho soils, 253–258
fixation by—
kaolinitic and montmorillonitic clays, 71–77
soil minerals, 243–250
in soil colloids, *see* Colloids
requirements of crops, 322–323
Physical characteristics of soils—
effect on moisture constants, 1–16
relation between ultraclay and volume of floc, 163–175
pH, effects on growth of citrus in sand and solution cultures, 455–465
Potassium—
content of alfalfa, *see* Alfalfa
content of 20 N. J. soils, 142

exchangeable, in relation to crop yields and requirements, 305–324
induced magnesium deficiency in McIntosh apple, *see* Magnesium
supplying powers of 20 N. J. soils, 139–149
translocation among peach roots, 51–59
Rose bengal, bacteriostatic action in plating media for fungi, 467–471
Sampling soil—
composite samples, 280–281
preparation of, 283
principles of, 275–288
sampling tools, 282
selecting sample, 279
stock sample, 285
Silica, fixation of phosphate by, 243
Sodium hexametaphosphate, use in preventing calcium carbonate precipitation, *see* Calcium carbonate
Soil-plant relations, 305–324; *see* also Potassium, exchangeable
Soil series, analyses, descriptions of, or experiments with—
